

A TIMELESS STORY...

This story begins with Mr. King casually mentioning that he “LOVES bamboo trees.” I remember thinking, “Huh, bamboo? That’s... interesting.”

Normally, I might have just let a comment like that slide, but something about it stuck with me. Why bamboo? What’s so special about it? Instead of brushing it off, I decided to dig deeper. And during my little quest to uncover the reason behind his peculiar love for bamboo, I stumbled upon a story called “The Bamboo and the Storm.”

Resilience...

It’s a trait we don’t hear enough about in today’s noisy world, yet it’s fundamental to human success. Resilience is the common thread in every story of triumph, whether it’s a person surviving a tough week or a historical figure changing the course of humanity.

From Julius Caesar to Elon Musk, every successful individual has overcome hardships. But what does it mean to be resilient? Does it mean bending, as the bamboo story suggests?

To “bend” is to adapt - to move with life’s storms rather than break under their weight. Life is unpredictable, and while challenges like exams, rent, or promotions are often out of our control, how we respond makes all the difference.

For example, if a friend forgets your birthday, instead of fostering resentment, you might say, “I noticed you missed my birthday, but I’d still love to celebrate with you!” This simple reframing turns conflict into connection.

Resilience is about adapting - bending without breaking. The more we embrace this mindset, the stronger and more prepared we become for life’s unpredictability.
